Le Langage Go Les bases du langage range

Itérer sur des éléments d'une structure de données

```
for <index>, <value> := range <data> {
    // code
}
```

range <data>

```
<index>, <value> := range <data>
```

```
for <index>, <value> := range <data> {
    // code
}
```

Example

```
nums := []int{15, -2}
for i, num := range nums {
    fmt.Printf("nums[%d]=%d\n", i, num) // output: nums[0]=15, nums[1]=-2
}
```
